

DATA FILE HANDLING

Aptitude Questions:

- 1) (I) Null
- 2) fgets(). This is because while using gets() the input is taken from user and the system keeps on taking it until the user hits enter button. If the string is too long, that may lead the buffer to overflow. On the other hand, fgets() asks the user to specify the maximum length of string, as its second argument. Hence, avoiding the overflow of input buffer.
- 3) Prints "File Handling!" and then an infinite loop runs.
- 4) File Handling!
- 5) (III) "Incredible India!\n\0"
- 6) (II) FILE is a structure, consisting of a char pointer f.
